Group 5

Completion of Rates (Per Week)

July 17 – 23	Grades	Task
Catubig, Gerald A.	90	Research Leader
Obus, Joneil L.	90	Programmer
Gabayoyo, Glen Michael E.	90	Asst. Programmer
Sulapas, Jericho C.	89	Researcher
Realo, Ivin Marish R.	89	Documentation

This week, our group started looking for a Job Application Form template to assist us in our brainstorming on how we would begin producing our assigned work. Following that, we began to develop a Job Application form for workers to fill up with their needed information and mobility throughout the organization in Joomla and discussing the flow of our features, such as gathering employee information.

July 23 – 30	Grades	Task
Catubig, Gerald A.	89	Research Leader
Obus, Joneil L.	89	Programmer
Gabayoyo, Glen Michael E.	89	Asst. Programmer
Sulapas, Jericho C.	88	Researcher
Realo, Ivin Marish R.	88	Documentation

This week, we added additional features lacking from the Job Application form, most especially the address. To make it more presentable and faster to locate the exact location of the employees, we decided to separate the home number from the street name, barangay, and city. Our leader instructed us to recommend another feature to include in the application form we are working on that day.

July 31 – August 5	Grades	Task
Catubig, Gerald A.	88	Research Leader
Obus, Joneil L.	88	Programmer
Gabayoyo, Glen Michael E.	88	Asst. Programmer
Sulapas, Jericho C.	87	Researcher
Realo, Ivin Marish R.	87	Documentation

We are close to finishing the Application form that we are working on this week. But before we do it, we double-check the details included in the application form. Our leader held a meeting to ask if we have any suggestions or recommendations in our given task to ensure that we understand what we have created. Developing another user-friendly publishing web is a great experience, especially for our hardworking and diligent programmers. Our Job Application form is simple, yet it is functional and accessible.
